

*GEO Data providers workshop 20, 21 April 2017, Florence, Italy*

**ISPRA**

Istituto Superiore per la Protezione  
e la Ricerca Ambientale

***Data provider short description.***

Geological Survey of Italy - ISPRA. The Geological Survey of Italy is the Italian public institution officially appointed for geological map-ping. It provides basic geological knowledge of the entire Italian territory.

***Type of organization:*** governmental

Public Research Institute under the supervision of the Ministry of Environment.

***Type of data:***

Geological data of the Italian territory, including submerged areas, validated and harmonized nationwide. Lithology, age, geometry, sediments grainsize, etc. of outcrops and buried substrate.

***Data policy adopted by your organization:***

Open access to final products (e.g. rasters of geological maps), limited access to raw data (that are property of authors)

***Already brokered or not by the GCI:*** NO

***For newcomers:***

- ***Why you are interested to join GEO and what you expect back.*** The Geological Survey of Italy is willing to share the wealth of data collected within its geological mapping Project (CARG), which are stored in a national database realized at the 1:25,000 scale. Cooperation with other providers might improve the quantity and quality of available data.
