

*GEO Data providers workshop 20, 21 April 2017, Florence, Italy*

Центр Океанографических Данных  
National Oceanographic Data Center (NODC)

- **Organisation:**

Russian National Oceanographic Data Centre (NODC) of All-Russian Research Institute of Hydrometeorological Information - World Data Center (RIHMI-WDC)

- **How do you contribute to the GEO Vision?**

We have created and are supporting information resources, which may be data sources for GEO (the Ocean Data Portal: <http://www.oceandataportal.org/>, WDC-B, <http://meteo.ru/mcd/ewdcoce.html>).

- **Type of organization: governmental- NGO- UN.etc.**  
governmental
- **Type of data:** observations, climate
- **Data policy adopted by your organization:** free data access
- **Already brokered or not by the GCI, Not**

**For newcomers:**

- **Why you are interested to join GEO- GCI**  
Russian NODC is a lead organization in Russia creation oceanographic data bases and facilities for access them using web. So, in ESIMO national state program (Unified Information System on World Ocean Conditions), as well as other projects, web portals with metadata for datasets, projects, organizations, information on vessels and other metadata objects have been created. The means for integrating distributed heterogeneous information sources into a union information space have been created. A similar problem is solved by the GEOSS system. We trust that our participation in the workshop will enable us to join the data exchange between ESIMO and GEOSS.
- **How GEO could benefit your organization**  
The participation of RNODC in the workshop will enable to enter into the data exchange, to receive the information on the development and application of software tools created within the GEOSS system.
