

GEO Data providers workshop 20, 21 April 2017, Florence, Italy

Data provider short description.

The Satellite Applications Catapult is a not for profit research and innovation company dedicated to fostering growth in innovation using satellite technologies. We primarily focus on the downstream applications of EO, satellite navigation and satellite communication. Other remits include research into data visualisation and machine learning, with a thematic focus on how satellite data can contribute to the sustainable development agenda. We are form part of the collaborative ground segment for Copernicus data, and we wish to facilitate improved access to EO data sets.

How do you contribute to the GEO Vision?

Encourage and facilitate the use of geospatial data to assist in data driven policy and the development of solutions that have a benefit to UK PLC and global societal challenges. We act as a conduit for the UK space community, in the unique position of holding a neutral status and bridging the gap between both industry and academia.

Type of organization: Company Limited by Guarantee

Type of data: Geospatial, including Earth Observation data, Sat communication and GNSS

Data policy adopted by your organization: The management and security of Catapult information and data (and that entrusted to us) conforms to the requirements of the Catapult Information Security Policy - this policy aligned to both Govt and commercial best practices and legislation e.g. Data Protection Act.

Already brokered or not by the GCI: No

For newcomers:

- ***Why you are interested to join GEO and what you expect back."***

Catapult are interest in becoming a participatory member with an expectation for a better broad understanding of GEO and how SAC should engage and become involved with GEO activities going forward.
