

GEO Data providers workshop 20, 21 April 2017, Florence, Italy

Data provider short description. Who you are

Global Change Research Data Publishing & Repository (GCdataPR); which is the China GEOSS data publishing center and sponsored by Institute of Geographic Sciences and Natural Resources Research, Chinese Academy of Sciences and The Geographical Society of China.

How do you contribute to the GEO Vision?

Providing GEO DAB the metadata of the published dataset in GCdataPR, which directly linked to the data products and the data papers in GCdataPR system.

Type of organization: governmental- NGO- UN..etc. Academy (research institute)

Type of data: Thematic description:

The GCdataPR datasets are multiple disciplinary data on global change studies, including the datasets from in situ observation, remote sensed applications, modeling analysis, et al.

Data policy adopted by your organization:

The term of the Data from the Global Change Research Data Publishing and Repository is the definition of metadata, dataset (data product), and data paper (published through Journal of Global Change Data & Discovery). The Data sharing policy includes: (1) the Data is openly available and can be easily to be downloaded through internet for all; (2) end users are encouraged to use the Data subject to citation; (3) users, who are value added provider services, are welcome to redistribute the Data subject to written permission from the GCdataPR Editorial Office for the Data redistribution license; (4) for database or new dataset developers who use the Data to compile new dataset, the “ten per cent principal” should be followed, that is, the picked records from the Data should not surpass 10% of the new dataset, and the data records source should be clearly noticed in the suitable place in the new dataset.

Already brokered or not by the GCI: Brokered.

For already brokered data providers

- **Benefits and issues encountered,**
GEO provide a platform to make the GCdataPR well known and make the staff communicate with other data providers.
The metadata in the GCdataPR was sent to GEO-DAB manually, which can't be linked to GEO-DAB timely.
- **What to improve.**

The metadata in the GCdataPR can directly link to GEO-DAB and update timely.
