

GEO Data providers workshop 20, 21 April 2017, Florence, Italy

Data provider short description.

We handle the Guatemalan Spatial Data Infrastructure –SDI– (IDEG in Spanish) mainly working with Geographic Information Systems –GIS– applied to Government task, planning and developing.

How do you contribute to the GEO Vision?

As a SDI leaders in our country we aim to promote the diffusion of free information access and use, under the open information and open source platforms.

Type of organization: governmental

Type of data: GIS, Socioeconomic Data, Statistics and Indicators

Data policy: open information from the government

Already brokered or not by the GCI, not yet

For newcomers:

- *Why you are interested to join GEO and what you expect back.”.*

We expect to get a new vision of how to publish data over the web, beyond our SDI project and some other platforms that we have already developed.
