

EL SALVADOR – Comments

Submitted via e-Mail

Dear friends of the Secretariat.

In the case of the Final Report of the Expert Advisory Group on GEOSS (EAG), El Salvador has no comments or opinions.

In the case of the Post-2025 working group report, in the bullet points of:

*Increase Equitable Access to Earth Observations*, it would be important and very beneficial for regions such as Central America and the Caribbean to include a section guaranteeing access to high-resolution images in cases of natural disasters and to assessment climate change impacts.

*Mobilize New Donors, Private Sector and Innovative Financing*: It would be important that part of the new funding be used to create a fund for young people of limited economic resources from the least developed countries to complete their master's or doctoral studies in earth observation programs. The AmeriGEO and GEO Week meetings have demonstrated this year the enthusiasm and the good future that young people represent.

Best regards.
